

Reimagining Glean's homepage

Simplifying the front door to Glean

Neel Saswade · Product Designer · Glean

Use the strongest full-width screen.

I helped shape the live homepage redesign around a simpler idea: one clear place to start, a small set of personalized cards, and a dependable home for company content.

The redesign increased chat sessions by +1.44 per user, combined sessions by +0.59 per user, and new-user activation by 1.3%. ([Homepage Redesign LE Results](#); [New Homepage Rollout: GTM Enablement Guide](#))

From widget grid to focused starting point

The previous homepage had accumulated widgets for calendar, announcements, feed activity, shortcuts, collections, and other destinations. Each surface had a reason to exist. Together, they made the page harder to scan and weakened the main path into Glean. ([Homepage Redesign Experiment Plan](#))

Make the simplification obvious.

The new homepage replaced the widget grid with a unified composer, personalized cards, and a dedicated Company Corner. Core destinations remained available through the product, while

the homepage became easier to understand at a glance. ([New Homepage Rollout: GTM Enablement Guide](#))

One place to begin

The unified composer lets people start with a question, a search, or a task without choosing a mode first. It stays at the center of the page and makes chat easier to discover. ([Homepage Redesign Experiment Plan](#))

Personalized cards that earn attention

The new card stack surfaces work that is relevant to the user now: follow-ups, meeting preparation, project activity, announcements, celebrations, and other timely suggestions.

The cards are lightweight by design. They provide enough context to understand the opportunity, then point into the deeper workflow where the work belongs. ([New Home Page PRD - New Layout + Psychic Lite Cards](#))

A Company Corner for shared context

Personalized work should feel personal. Company announcements, resources, and recommended agents needed a stable, admin-configurable home.

The Company Corner preserved that enterprise need without putting every company update into the primary work surface. ([New Homepage Rollout: GTM Enablement Guide](#); [Tiger Global - Homepage Feedback](#))

[IMAGE PLACEHOLDER 05]

A system for deciding what belongs

The redesign reduced the number of jobs Home had to perform directly. Search and chat started in the composer. Personal work surfaced through cards. Company content lived in Company Corner. Top Sites remained available. Calendar moments and relevant activity could appear when they were useful.

This placement strategy gave the homepage a stronger hierarchy and gave future capabilities a clearer place to go. ([New Homepage Rollout: GTM Enablement Guide](#))

The impact

The experiment showed a measurable shift toward chat, personalized cards, and navigation. Combined sessions increased by +0.59 per user after CUPED adjustment. Chat sessions increased by +1.44 per user. New-user activation increased by 1.3%. ([Homepage Redesign LE Results](#))

Search sessions declined, which created the next design question: how can the homepage stay focused while keeping search highly visible for retrieval-heavy workflows? ([Homepage Redesign LE Results](#); [Glean New Homepage - Ent/Strat/Comm Admin Feedback Summary 4.27.26](#))

Use one strong chart or final shipped screen.

What comes next

Now that the live homepage has a simpler, more static foundation, we can explore how it becomes more adaptive over time.

The next phase focuses on richer work states, more contextual recommendations, stronger continuity across the day, and better ways for people to understand and steer what appears. The live surface gives us a stable place to learn from while we improve relevance, timing, and trust. ([🏠 Homie-page Workstreams](#); [Homepage Architecture - design brief](#))
