

Psychic

Eyebrow: Product Designer · Glean · 2026

Designing relief before the work begins

I designed the moment before someone asks Glean for help: when the product notices what is happening, offers a useful next step, and makes work feel lighter.

Psychic brings a small amount of useful momentum to the start of the workday.

Overview

Psychic was built to help people discover what Glean could do for them. Early versions surfaced tasks that were broad, ambiguous, and easy to miss. I led the design shift toward a proactive work experience grounded in context, clear outcomes, and user control. [The Next Version of Psychic](#)

The question

How can coming back to work in Glean feel lighter?

The product needed to understand the user's day before offering help. A suggestion had to feel timely, specific, and connected to real work. It also had to leave the user feeling in control.

The moment before the suggestion

I started with the conditions around a task: a meeting later that day, a recent conversation, an unfinished document, or a teammate waiting for a response. These signals gave Psychic a chance to offer help in the moment it mattered.

That changed the design target. Psychic was no longer only deciding which task to show. It was designing the feeling of arriving in Glean and finding a useful next move already waiting.

Making work feel possible

I moved the experience away from vague task labels and toward concrete outputs. “Review Table Artifacts prototype” became “Review the Table Artifacts prototype before your 2 PM sync with Arpit.” “Drive more usage with Cowork” became “Draft the Cowork adoption update for Thursday’s Growth review.”

The work remained central. The difference was the emotional weight of the invitation. A clear verb, a specific object, and the minimum useful context made the next step easier to understand.

I built this map to decide which kinds of work Psychic could surface with confidence.

Designing the interaction, not just the card

The original experience showed one ranked task at a time. I proposed three suggestions near the composer so the user could scan, choose, and continue without committing to the first thing Psychic surfaced.

The default state stayed quiet. The interaction revealed more only when needed: the source, expected output, primary action, feedback, and ways to dismiss or redirect the suggestion. Clicking a suggestion led into work with Glean instead of making the user choose a mode first.

The suggestion is simple at first glance, with control available when the user needs it.

Helping before asking

The larger direction was proactive work. Psychic could prepare a draft, gather context, or make a plan before the user wrote a prompt. When confidence was lower, the product could open a collaborative path and let the user steer.

I used research planning to test whether people understood what had happened, why the suggestion appeared, what Glean had used, and what they could review or change. Trust depended on those boundaries being visible. [Psychic Pre-Executions research plan](#)

Impact

In the bundled homepage experiment, Psychic Lite cards were one of the top-gaining surfaces at +0.60 average clicks per user. The broader redesign increased chat sessions by +1.44 per user and combined sessions by +0.59 per user after CUPED adjustment. New-user activation increased by 1.3%. These results came from the full homepage bundle, which included the composer, navigation, and Psychic Lite cards. [Homepage Redesign LE Results](#)

The product also exposed a tradeoff. Search usage declined as more homepage intent moved toward chat, navigation, and proactive suggestions. That became the next design question: how can Glean help people move forward while still making retrieval feel immediate?

What continued

The work became a foundation for proactive intelligence: a system that notices meaningful work, prepares a useful next step, and gives the user a clear way to continue. The long-term direction combined reliable baseline suggestions with deeper personalization, while keeping the experience grounded in trust and agency. [Psychic v2 Executive Brief](#)
